Abstract

Following the recommendations of the Higher Education Study Commission Report of 1965 to the Governor and General Assembly of Virginia, the State Council of Higher Education produced this report on instructional volume and cost. The report, based on data from 27 state-controlled Virginia colleges and universities for the Fall 1967 term, analyzes 3 areas: courses and classes, student-credit-hours produced; and faculty and instructional costs. For tabular presentation and analysis, the 4 academic levels of courses (foundation, lower, upper, and graduate and professional) and student-credit-hours produced are divided into 27 subject areas. Faculty instructional volume is determined on the basis of the number of student-credit-hours resulting from classes taught. The average instructional cost per student-credit-hour for all institutions ranged from approximately \$15 at the foundation level to \$37 at the graduate and professional level. Of the approximately 7000 courses taught, approximately .1% were at the foundation, 44% at the lower, 41% at the upper, and 15% at the graduate and professional level. The data are presented extensively in tables. An appendix includes summary tables. (DS)

INSTITUTIONS PRESENTED IN THIS REPORT^a

Four-Year Colleges and Universities

George Mason College, Fairfax
Longwood College, Farmville
Madison College, Harrisonburg
Mary Washington College, Fredericksburg
Old Dominion College, Norfolk
Radford College, Radford
Richmond Professional Institute, Richmond^b
University of Virginia, Charlottesville
Virginia Military Institute, Lexington
Virginia Polytechnic Institute, Blackburg
Virginia State College, Norfolk^c
Virginia State College, Petersburg
William and Mary, Williamsburg

Two-Year Colleges

Divisions of the State Department of Community Colleges
Blue Ridge Community College, Weyers Cave
Central Virginia Community College, Lynchburg
Dabney S. Lancaster Community College, Clifton Forge
Danville Community College, Danville
John Tyler Community College, Chester
Northern Virginia Community College, Bailey's Crossroads
Virginia Western Community College, Roanoke
Wytheville Community College, Wytheville

Institutions Affiliated with the University of Virginia

Clinch Valley College, Wise
Eastern Shore Branch, Wallops Island
Patrick Henry College, Martinsville

Institution Affiliated with Virginia Polytechnic Institute Danville Division, Danville^e

Institutions Affiliated with William and Mary
Christopher Newport College, Newport News
Richard Bland College, Petersburg

^aThe listed institutions' names, affiliations, and status are presented as of the fall term 1967, the date of the material analyzed for this report. Since that date, several changes have occurred which are enumerated in other footnotes.

^bOn July 1, 1968, Medical College of Virginia and Richmond Professional Institute were combined to form Virginia Commonwealth University.

^cThe name of Virginia State College, Norfolk was changed to Norfolk State College on February 1, 1969.

^dClinch Valley College is in transition to four-year status; third-year courses are being offered in 1968-69.

^eDanville Division of Virginia Polytechnic Institute merged July 1, 1968, with Danville Community College.

INTRODUCTION

Consistent with the recommendations of the Higher Education Study Commission Report of December 1965 to the Governor and the General Assembly, the State Council of Higher Education presents in this report analyses of resident courses taught, student-credit-hours produced, and instructional salary costs at the state-controlled colleges and universities. All analyses are based on data for the fall term of 1967-68.

This publication is a companion to the State Council's report Those Employed at Virginia's Colleges. Both of these reports are second annual editions.

In the last 10 to 15 years such studies have received nation-wide recognition as essentials in state-wide planning and financing of higher education. Legislators, governing and coordinating boards, and other public officials in many states have recognized the need for an application of "cost accounting" to expenditures for higher education. Their requests for objective analyses of instructional costs have resulted in the preparation of annual studies similar to these reports by the State Council. Educators and law makers have found few other means of obtaining meaningful interpretations of instructional costs of institutions with variations in missions, enrollments, and program offerings.

The State Council plans to conduct similar studies in the future in an effort to present comprehensive analyses of the volume and cost of instructional services at Virginia's state-controlled colleges and universities.

Scope of the Report

The listing of institutions included in this report warrants examination because of the numerous changes in Virginia's state-controlled colleges and universities since the fall term of 1967-68. It is also brought to the attention of those using this report that classes taught by faculty contributing their services and by faculty members compensated from funds not controlled or disbursed by their respective institutions have been omitted from this study. Included in this group would be military science classes, classes taught by instructors receiving no pay, and classes taught through the auspices of other public agencies at no expense to the institution. In addition, the time and salary of faculty members teaching non-credit courses have been omitted from the analyses. The engineering and architecture offerings available at Richmond Professional Institute (now a part of Virginia Commonwealth

University) in cooperation with Virginia Polytechnic Institute and the Medical College of Virginia (now also a part of Virginia Commonwealth University) are not included in this study. The Department of Marine Science and medical instruction (with the exception of nursing) at the University of Virginia, and the School of Marine Science at William and Mary have been omitted from this study. In addition, 18 classes producing a total of 1,405 undergraduate student-credit-hours at Virginia Polytechnic Institute have been excluded from the study since salary data for the instructors were not provided to the State Council. These 18 classes were taught by teaching assistants who were paid from local or special funds.

The data reported by the institutions on a quarter system (Virginia Polytechnic Institute, Radford College, all of the community colleges, and Danville Division of VPI) have been adjusted to a semester basis for Sections 2 and 3 of this report, and appropriate adjustments have been made for Radford College which operates on a quarter system but awards credit in semester credit-hours.

Definitions and Basic Criteria for Analyses

All analyses in this report have been made by dividing four academic levels of courses of instruction and student-credit-hours into 27 areas of study adapted from the United States Office of Education course classification system. These 27 subject fields do not necessarily correspond to the departmental organization of the various institutions. Courses of instruction have been classified by the institutions as foundation level, lower level, upper level, and graduate and professional level. Developmental courses preparatory for admission to occupational-technical, university parallel-college transfer, or 4 or 5-year degree programs have been reported as foundation level. Courses designed for freshmen and sophomores have been reported as lower level. Courses designed for juniors and seniors and not normally open to freshmen and sophomores have been reported as upper level. Courses designed for students enrolled in a graduate degree program and normally limited to students holding a bachelor's degree, as well as courses designed for students enrolled in a first professional degree in law (J.D. or LL.B.), have been reported as graduate and professional level courses.

"Level of instruction" in this report is interpreted in two different ways. In some sections analyses are made by level of student and in others analyses are by level of course.

The analyses by student level are carried out in terms of the academic level of students actually enrolled in the courses regardless of the course level designation. Analyses by course level, on the other hand, are made in terms of the designated level of the courses as determined by institutional officials. It must be noted that evening class students at Virginia State College in Norfolk were not classified as to student level during the fall term of 1967-68. For the level of student analyses they have been classified according to course level.

For the purposes of this study, faculty instructional activities for resident credit and their direct salary costs have been determined on the basis of the number of student-credit-hours resulting from classes taught without reference to student-contact or clock hours. One student-credit-hour would result from one student taking a one-credit course for a given term, and a class of 10 students enrolled in a three-credit course would produce 30 student-credit-hours. It is most important that those examining this report appreciate the effect of this method of analysis, particularly for courses that have extensive laboratory work by the students in addition to normal lecture sessions.

Faculty members, as presented in this study, include those individuals in resident teaching activities, either on a full-time or part-time basis, who are responsible for and are in charge of class, quiz, drill, or laboratory sections. Included are laboratory assistants, teaching assistants, teaching fellows, and lecturers if they meet the preceding criteria. Faculty members teaching during the evening hours have been included if their classes were offered for resident credit. Not included, however, are student assistants, teaching assistants, or other personnel engaged in subordinate functions.

The statistic of full-time-equivalent (FTE) faculty member has been utilized in this study to provide a common basis of comparison for full-time and part-time faculty members. Part-time instructors and faculty members not devoting full-time to resident credit instruction were included in the summaries of FTE faculty members at a percentage of full-time as reported by the respective institutions.

SECTION I - ANALYSES OF COURSES AND CLASSES

NUMBER OF DIFFERENT COURSES TAUGHT

Any institution of higher education, in implementing its philosophy and attaining its objectives, must relate its program to the competence of its faculty and to the ability and desires of its students. Also, the number and variety of curricula and courses offered by colleges and universities is influenced by a number of other factors. Of particular significance are (1) faculty interests and ambitions, (2) financial resources available to the institution, (3) student enrollments, and (4) competition for qualified faculty.

Tables 1 through 5 present the number of different courses taught by course level and subject field at each institution during the fall term 1967-68. In these tables a course has been counted only once, thereby omitting from the analyses any duplicate sections. Laboratory and quiz class periods have been considered as separate courses. These tables may be studied by the reader in a variety of ways to appreciate the range of course offerings at the institutions. If one assumes that a full-time student takes ten courses during the period of a year, he would be able to complete all the fall of 1967-68 offerings at the smallest two-year institution in three years while it would take in excess of 92 years to complete all the offerings at the university with the broadest spectrum of course offerings.

Table 6 represents one approach to analyzing course offerings by comparing full-time-equivalent (FTE) student enrollments (by institution and course level) with the number of different courses taught during the same term. For example, the total column of Table 5 shows that 257 different courses at all levels were taught at Longwood College. Table 6 indicates there were 1,817 FTE students enrolled in these courses during the same term. Therefore, there was one different course taught for each 7.1 FTE students at Longwood.

Student-course ratios presented in Table 6 show that, at the lower level, VPI's ratio of 32.3 is more than twice the average for all four-year institutions. This high ratio is partially responsible for this university's low instructional salary cost per student-credit-hour produced which is presented later in the report. In contrast, Virginia State College-Petersburg has a different course for every 5.8 students at the lower level. Subsequent analyses indicate a much higher instructional salary cost per lower level student-credit-hour produced at Virginia State-Petersburg than is found at other institutions.

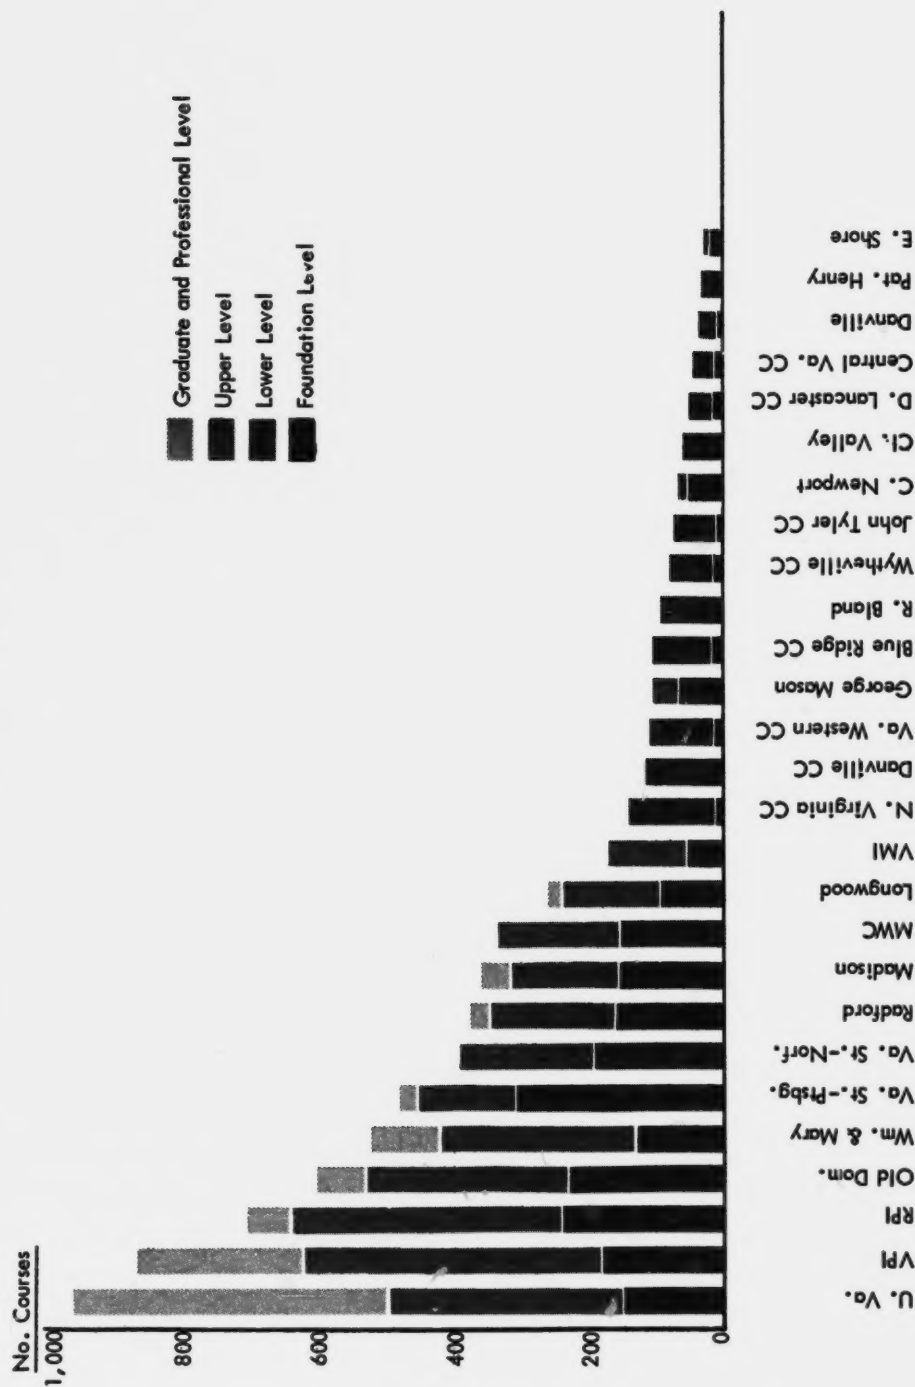

Among the two-year institutions the student-course ratios of Eastern Shore are quite low, no doubt caused primarily by an enrollment of fewer than 100 FTE students. Data in a

later section show that this institution also has considerably higher instructional salary costs per student-credit-hour produced than the other two-year institutions.

At the upper level, George Mason, Old Dominion, Radford, RPI, the University of Virginia, and VPI have student-course ratios which are above or comparable to the state average for all institutions.

Any analysis of the graduate and professional level of Virginia's state-controlled institutions must recognize that there is a small state-wide graduate enrollment, and the fact that over 70 per cent at this level attend the University of Virginia and VPI. It is of interest to note, however, that, although VPI's student-course ratios at the lower and upper levels are the highest of all institutions, its ratio at the graduate and professional level is low.

^aFTE student enrollment derived from student-credit-hours classified according to course level. The FTE enrollment is derived by dividing foundation, lower, upper, and professional and graduate level law student-credit-hours by 15 and graduate student-credit-hours by 12. Because of the lower divisor for graduate student-credit hours, a slight variation in the number of FTE students calculated by course level and the number calculated by student level results.

NUMBER OF CLASSES TAUGHT

Many of the different courses included in Tables 1 through 5 are taught in two or more class sections because of large enrollments. Tables 7 through 11 show the number of class sections taught by course level and subject field at each institution during the fall term of 1967-68. As an example of the difference in data on courses and those on classes, a lower level course in mathematics, taught in five class sections, perhaps because of a large enrollment, would only be listed as one course in Table 2. In Table 8, however, it would be included in the mathematics and statistics column as five classes.

CHART 2--TOTAL NUMBER CLASSES TAUGHT BY LEVELS, FALL TERM 1967-68

SEMESTER HOURS OF CLASSES TAUGHT

The number of semester hours of classes taught by course level, subject field, and institution is presented in Tables 12 through 16. This analysis serves as one evaluation of the volume of instruction since it includes the aggregate of the credit values of every class, quiz, and laboratory section offered during the fall term of 1967-68.

The number of semester hours of classes taught is quite often used by institutions as the sole measurement of faculty load. Under these circumstances the data which are presented in Tables 12 through 16 can serve as an index to faculty requirements.

Another, and perhaps more useful, measurement of faculty load are statistics such as those presented in Section 2--student-credit-hours produced. Data in that section recognize the number of students enrolled in courses as well as the credit value of the courses.

CHART 3--TOTAL SEMESTER HOURS OF CLASSES TAUGHT AT ALL COURSE LEVELS, FALL TERM 1967-68

WEIGHTED AVERAGE SIZE OF CLASSES TAUGHT

One approach to a study of class sizes would be to divide the total enrollment for all classes by the number of classes taught. However, a preferable interpretation of class size is one that gives consideration to variations in credit values, since an insight into faculty instructional loads can be obtained from this analysis. Data on weighted average size of classes taught, such as are presented in Tables 17 through 21, are obtained by dividing student-credit-hour totals by the aggregate credit value of all classes. This analysis recognizes variations in credit values since a class offering three hours credit is included in the average at three times the weight of a class having only one hour credit. The reader is again cautioned that the 27 subject fields shown in these tables do not necessarily correspond to the departments of instruction with similar titles at the various institutions.

At the lower level, shown in Table 18, the weighted average size of classes varies from 35.0 at VPI to 18.6 at Virginia State College-Petersburg for the four-year colleges and universities. For the two-year colleges, the range is from 27.8 at Clinch Valley to 10.7 at Eastern Shore.

At the upper level, shown in Table 19, the weighted average size of classes for four-year colleges and universities ranges from a high of 24.0 at VPI to a low of 9.6 at Virginia State College-Petersburg.

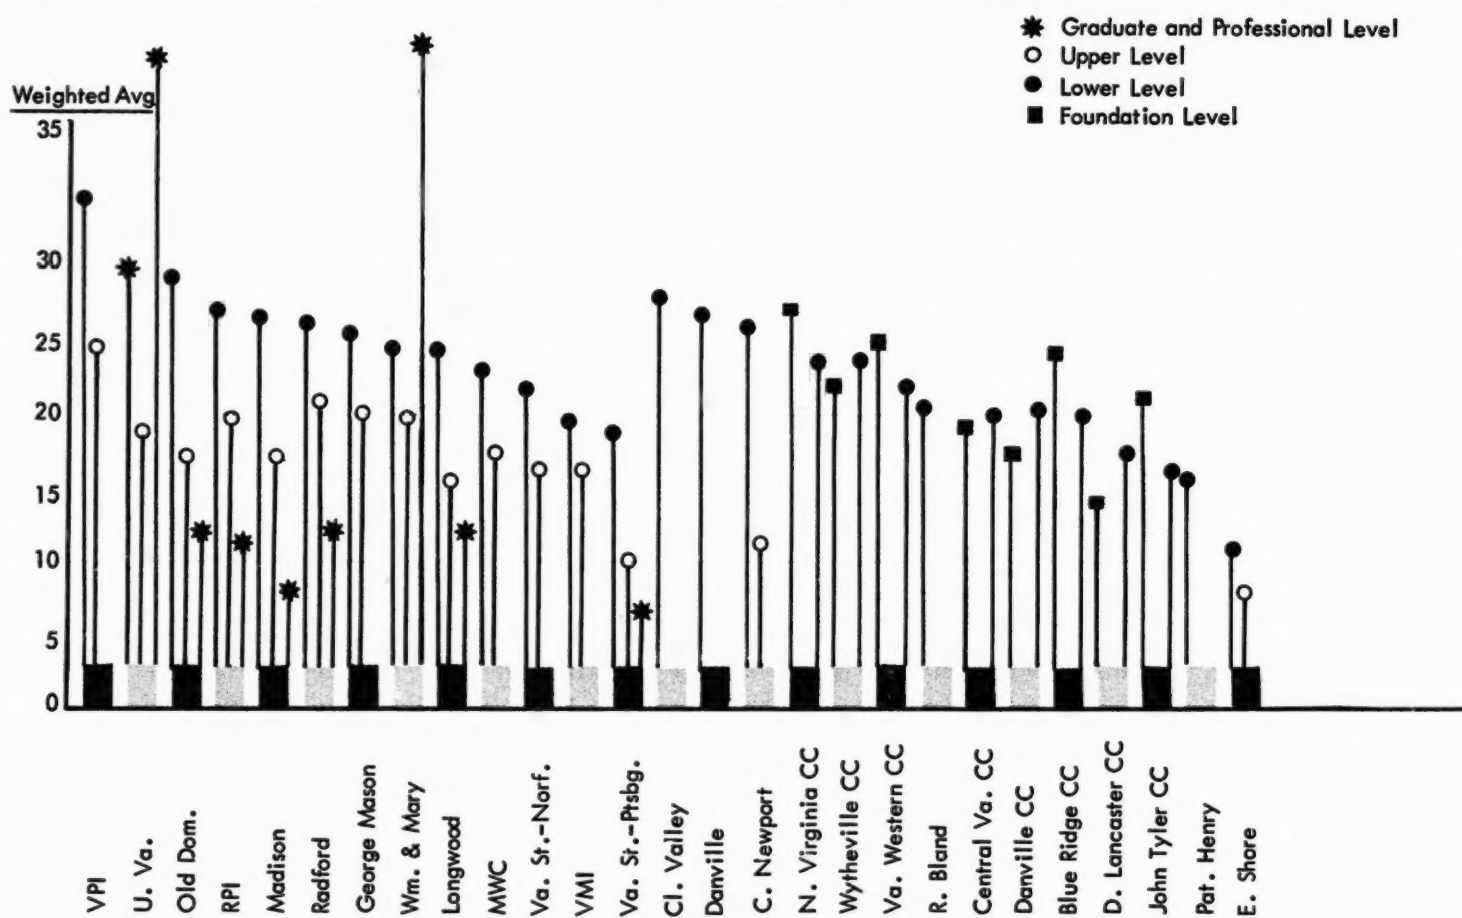

As indicated in Table 20, the weighted average sizes of classes at the graduate and professional level are significantly below those at other levels. This is primarily due to small graduate enrollments, directed study, and individual research. Notable exceptions are the fields of business administration and law at the University of Virginia and William and Mary where larger enrollments are concentrated in a limited number of courses. VPI's low institutional average of 2.7 results from having 28 per cent of its different course offerings and only 6 per cent of its FTE student enrollment (by course level) at the graduate and professional level.

The weighted average size of classes for all levels combined is presented in Table 21. This analysis includes an institutional average for the University of Virginia which should receive comment. At each level, the University of Virginia's weighted average size of classes taught equals or exceeds the average for all institutions. In the analysis for all levels combined, however, this institution's average is 15.4 while the state-wide average is 20.1. To explain this unusual average in the analysis for all levels combined, the following calculations were prepared:

<u>University of Virginia</u>	<u>Lower</u>	<u>Upper</u>	<u>Graduate and Professional</u>	<u>Total</u>
Percentage of Different Courses at Each Level (From Tables 2 through 5)	15.9	34.5	49.6	100.0
Percentage of Semester Hours of Classes Taught (From Tables 13 through 16)	21.2	23.4	55.4	100.0

Study of Tables 2 through 5 and 13 through 16 reveal that none of the other institutions has such a degree of concentration of courses and semester hours at the graduate and professional level as does the University of Virginia. Since over 55 per cent of this institution's semester hours of classes taught have a weighted average class size of only 8.4, it is quite apparent that this accounts for the below average ratio in the analysis for all levels combined. This commentary further substantiates the importance of conducting instructional cost studies on a course or student level basis.

CHART 4--WEIGHTED AVERAGE SIZE OF CLASSES TAUGHT BY COURSE LEVEL, FALL TERM 1967-68

SECTION 2 - ANALYSES OF STUDENT-CREDIT-HOURS

STUDENT-CREDIT-HOURS PRODUCED

The best measure of the volume of instructional service which has been devised to this point is the number of student-credit-hours produced. One student-credit-hour represents one student taking a one-credit course for one term. Total student-credit-hour production for any class is obtained by multiplying the number of students enrolled in the class by the credit value of that class. For example, a three-credit class in which there are 25 students enrolled would yield 75 student-credit-hours. Data on student-credit-hours may be interpreted as instructional out-put or production.

Student-credit-hour data are presented in terms of the four levels of instruction used in all previous tables in this report. "Level of instruction" is interpreted in two different ways in this section. The first four tables present analyses by level of course and the next four tables present analyses by level of student. The last table, Table 30, presents data for all levels combined. The analyses by student level are carried out in terms of the academic level of students actually enrolled in the courses regardless of the course level designation. Analyses by course level, on the other hand, are made in terms of the designated level of the courses as determined by institutional officials. Thus, under the latter classification, all student-credit-hours generated by a particular lower level course would be designated as lower level student-credit-hours even though some juniors and seniors might be enrolled in the course.

Typically, analyses of this type which have been made on a state-wide basis have been made by course level rather than level of the student. However, in recent years individual institutions which have engaged in such studies have tended to use student level as the basis of analysis. Calculations of student-credit-hours produced have been prepared both ways for purposes of this study in order to determine the magnitude of differences in the two methods. The following calculations reveal that the two methods result in substantial differences for some institutions while the differences at others are slight.

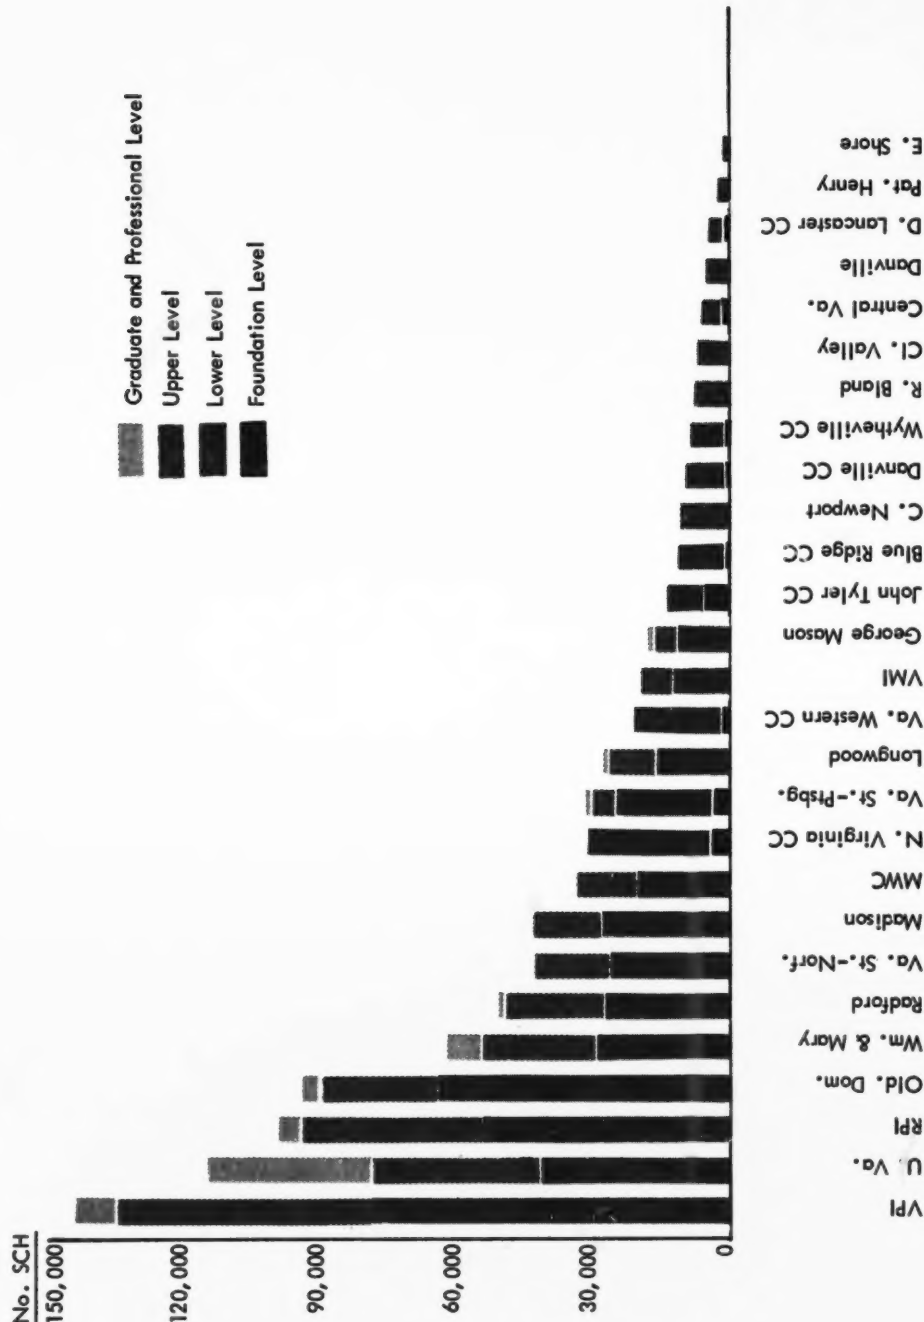

Student-Credit-Hours Produced--4-Year Colleges and Universities

	Foundation			Lower			Upper			Graduate and Professional

Total	<u>3,330</u>	<u>--</u>		<u>434,267</u>	<u>488,118</u>		<u>279,256</u>	<u>232,603</u>		<u>59,430</u>	<u>55,562</u>	

In the aggregate, the "course level" method results in a 12.4 per cent greater number of student-credit-hours at the lower level than does the "student level" method. At the upper level the course level method results in 16.7 per cent fewer student-credit-hours and at the graduate and professional level the course level method results in 6.5 per cent fewer student-credit-hours. These data suggest that, in the aggregate, a substantial number of upper level students enroll in lower level courses and a substantial number of graduate students enroll in upper level courses.

It is believed that the student level method is the more appropriate of the two measures because (1) it is subject to a greater degree of uniformity of application among institutions and (2) the level of students in a class is a more accurate identification of the level of instruction than a sometimes arbitrarily defined course level. Institutions sometimes differ widely with respect to stratification of courses by level. Some institutions might have a rather loose interpretation of level and open a number of courses to students at different levels. Other institutions might adhere strictly to the course level identification and permit only students at the same level as to the course to enroll in the course.

CHART 5--TOTAL STUDENT-CREDIT-HOURS PRODUCED BY STUDENT LEVEL, FALL TERM 1967-68

It is interesting to compare institutions with respect to the proportion of student-credit-hours produced at the various levels. Chart 5 shows these comparisons, using the student level method of identifying student-credit-hours.

Significant variations exist among institutions with respect to the mix of student-credit-hours produced by level. At the lower level there is a range from a low of 37.0 per cent at the University of Virginia to a high of 72.5 per cent at George Mason. At the upper level there is a range in percentages from 27.5 at George Mason and 27.3 at Old Dominion to 42.0 at Radford. At the graduate level the range is from zero at four institutions which offer no graduate work to a high of 29.8 per cent at the University of Virginia. These differences among institutions are quite meaningful insofar as the faculty resources needed by institutions are concerned. Practically all institutions have, and should have, marked differences among the four levels in the ratio of student-credit-hours to faculty. Thus, the greater the proportion of an institution's students at the upper and graduate levels the lower the student-teacher ratio for the institution should be.

The following listings show how the various subject fields rank with respect to the number of student-credit-hours produced in the 27 fields.

City Planning	946	0.1
Other Health Professions	869	0.1
Total	909,310	100.0

These statistics reflect rather clearly those fields at the lower level in which students are enrolled most frequently during their freshman and sophomore years. These fields include the social sciences, English, mathematics, physical science, and the like, which comprise the major portion of most general education programs. At the upper level, certain professional fields such as education, business administration, and engineering rank among the top fields, reflecting the enrollment of substantial numbers of students in these fields during their junior and senior years. The data also reveal heavy concentrations of students at the graduate and professional level in certain professional fields such as law, education, business administration, and engineering.

SECTION 3 - ANALYSES OF FACULTY AND INSTRUCTIONAL COSTS

The total time of each faculty member engaged in resident teaching during the fall term of 1967-68 was reported to the State Council by the institutions. The statistic of full-time-equivalent (FTE) faculty member has been utilized to analyze these data by student level, subject field, and institution. This FTE tabulation equates the total time devoted to resident instruction by each full- and part-time faculty member to full time.

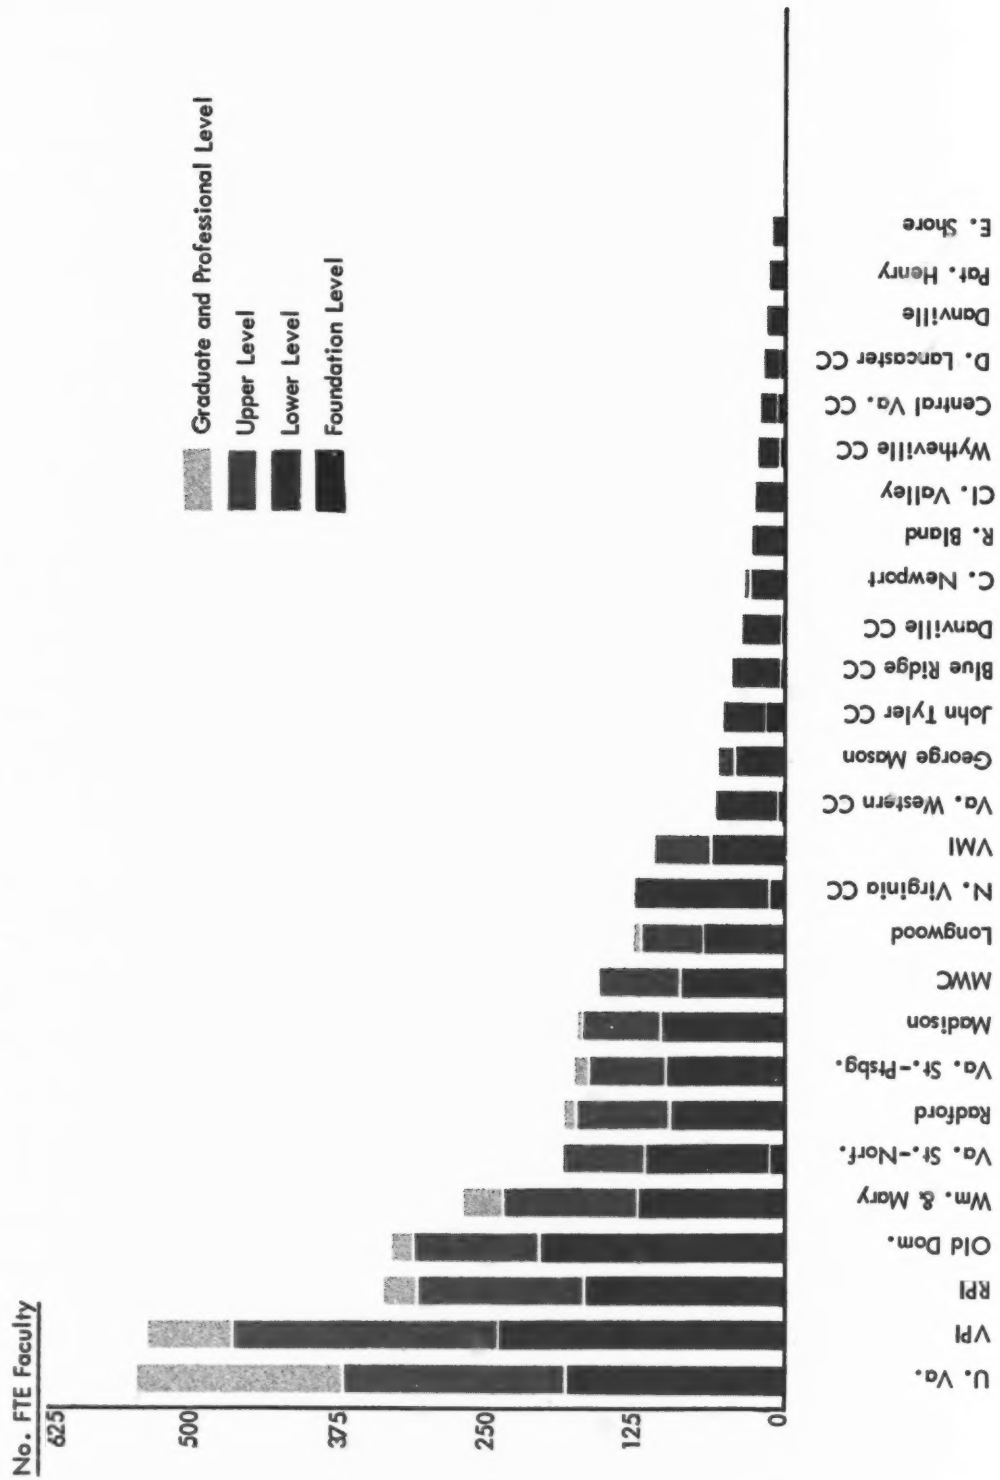

For the purposes of this report, the time of a faculty member teaching in two or more subject fields has been allocated on the basis of the total credit value of courses he taught. The faculty member's time has been further allocated on the basis of the student-credit-hours produced at the four levels (foundation, lower, upper, and graduate and professional).

The FTE resident teaching faculty by student level and subject field are presented in Tables 31 through 35 with summary data in the accompanying chart. This analysis shows that approximately 1.5 per cent of the instructional staff of all institutions was at the foundation level, 56 per cent at the lower level, 33 per cent at the upper level, and 9 per cent at the graduate and professional level.

Table 36 represents one interpretation of the faculty data by comparing FTE student enrollments (by institution and student level) with FTE faculty. Among the four-year institutions at the lower level, the ratio of students to faculty varies from a low of 13.2 at VMI and 13.3 at Virginia State-Petersburg to a high of 22.1 at VPI. These ratios drop substantially at the upper level where the low is 9.8 at Virginia State-Petersburg and the high is 19.5 at RPI. At the graduate and professional level the range for four-year colleges and universities is from 7.7 at Virginia State-Petersburg to 18.1 at Radford.

NUMBER OF FULL-TIME-EQUIVALENT RESIDENT TEACHING FACULTY

CHART 6--TOTAL FTE RESIDENT TEACHING FACULTY BY STUDENT LEVEL, FALL TERM 1957-68

**AVERAGE STUDENT-
CREDIT-HOURS
PRODUCED PER FULL-
TIME-EQUIVALENT
FACULTY MEMBER**

Tables 37 through 41 show the average number of student-credit-hours produced per FTE faculty member based on fall term 1967-68 data equated to a nine-month period. It is necessary to show student-credit-hour productivity on a nine-month basis since both the quarter and semester systems are utilized by Virginia's state-controlled institutions.

The average number of student-credit-hours produced per FTE faculty member was obtained by dividing the total student-credit-hours produced (by student level) by the number of FTE resident teaching faculty at the corresponding level. The results were then multiplied by two in order to equate to a nine-month basis. Special adjustments were necessary for Radford which operates on a quarter basis but reports credit-hour data on a semester basis.

The reader should give consideration to several factors which may have influenced the results of this analysis. High or low student-credit-hour productivity may indicate an inappropriate number of classes and/or students having been assigned to faculty members, but it may also be caused by the type of courses taught. Although it is difficult to assess what the student-credit-hour productivity in the various fields should be, differences in subject matter, teaching methodology, and the like, are suggestive of differences in student-credit-hour expectancy among the various fields.

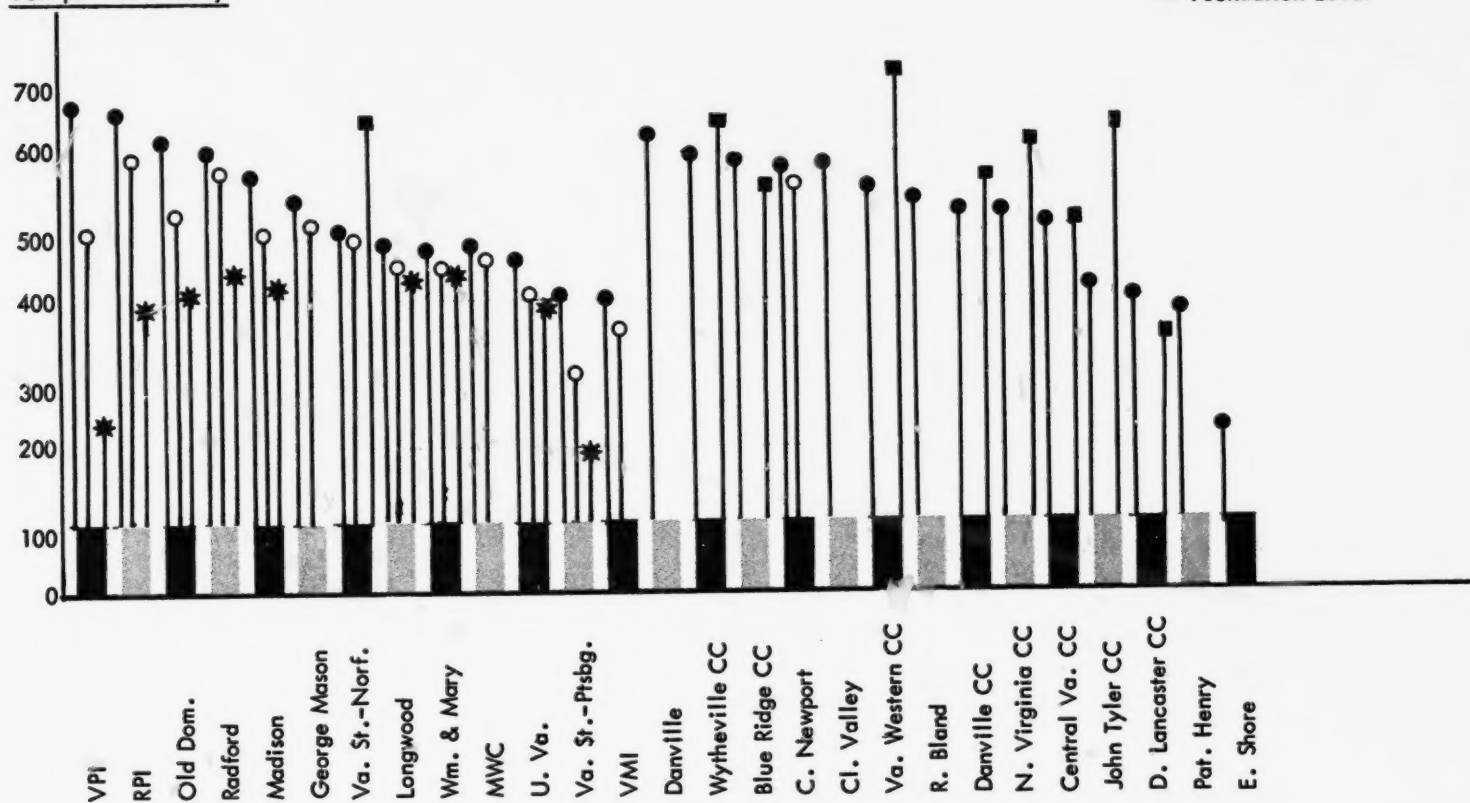

In Table 42, the average student-credit-hours produced per FTE faculty member by subject field for all institutions is presented so that the 1967-68 data may be compared with that of the previous year. The foundation level is not included in Table 42 since this level was not reported by any institutions for the 1966-67 fall term.

It may be observed in Table 42 that no definite patterns of faculty productivity can be noted in the data for 1966-67 and 1967-68. Definite trends may emerge when the student-credit-hour productivity of one or two more future years can be compared to the analysis. The table does, however, emphasize the importance of subject field analysis of faculty productivity as opposed to the general observations that may be made of faculty productivity by student level. Institutional planning and budgeting can only have limited value if it is based only on faculty productivity by student level and does not give consideration to the diverse nature of the course offerings of the various institutions.

INSTRUCTIONAL SALARY COST PER STUDENT-CREDIT- HOUR PRODUCED

Presented in Tables 43 through 47 are instructional salary costs per student-credit-hour produced by student level, subject field, and institution for the fall term of 1967-68. This analysis was obtained by dividing the total resident teaching salaries (Tables A through E of the appendix) by the student-credit-hours produced (Tables 26 through 30).

Only salaries paid for resident credit instruction have been included in the analyses of faculty remuneration. That portion of salaries paid for institutional activities other than resident teaching has been excluded from this study in accordance with the institutions' allocations of their faculty members' time. Also, an adjustment has been made to the time and salary of faculty teaching non-credit courses so that these activities would not distort the costs of resident credit instruction. The salary of a faculty member teaching in two or more subject fields has been allocated to each of the different areas of study on the basis of the total credit value of courses he taught. The faculty member's salary for each subject field has been further allocated on the basis of student-credit-hours produced at the four levels (foundation, lower, upper, and graduate and professional).

The instructional salary cost per student-credit-hour produced is an index to the financial efficiency of the instructional programs since it is the product of faculty salaries and productivity. Lowering and raising faculty salaries or productivity will affect the instructional salary cost.

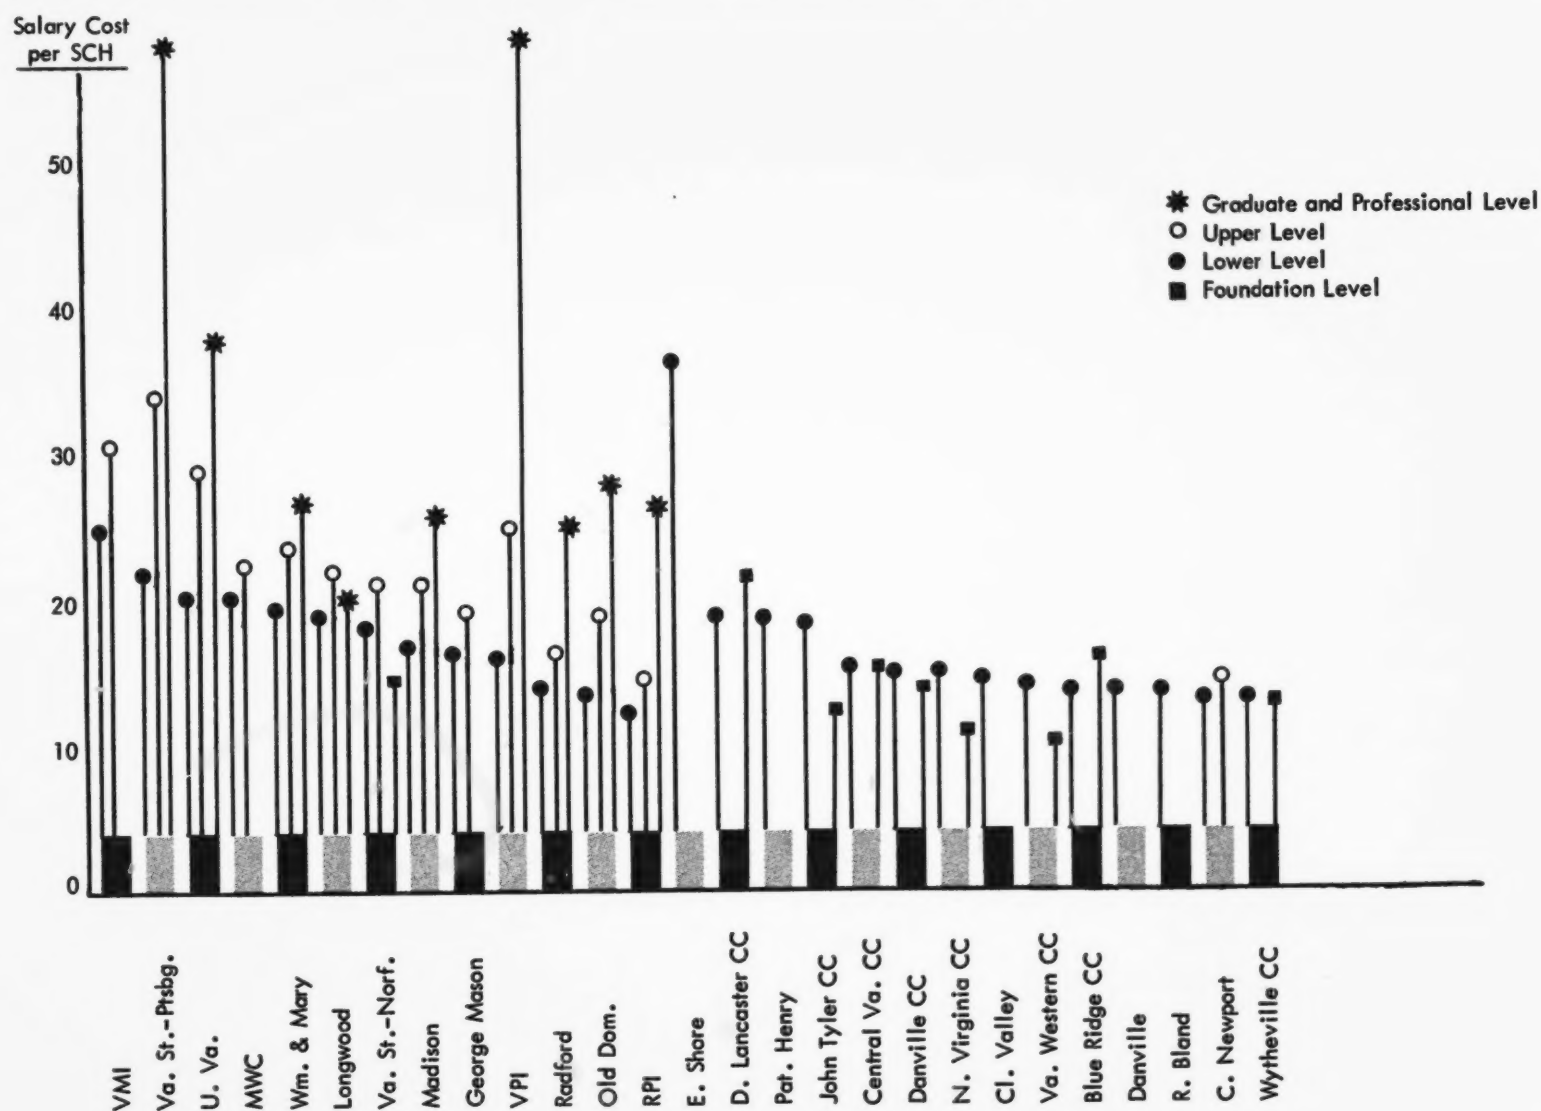

At the foundation level, shown in Table 43, the average instructional salary cost per student-credit-hour produced for all institutions ranges from a low of \$9.79 at Virginia Western Community College to a high of \$21.00 at Dabney Lancaster Community College.

At the lower level, shown in Table 44, the average instructional salary cost per student-credit-hour produced for the two-year colleges ranges from a low of \$12.81 at Wytheville Community College to a high of \$35.73 at Eastern Shore. For the four-year colleges and universities the range is from \$11.79 at RPI to \$24.06 at VMI. The average for all institutions is \$15.97.

At the upper level, as shown in Table 45, the average for all institutions is \$21.62 and at the graduate and professional level (Table 46) the average is \$37.40. Thus, the average cost of upper level offerings is 40 per cent higher than lower level offerings and graduate and professional level offerings are 140 per cent higher, on the average.

Table 46 shows a wide range in costs among the various institutions at the graduate and professional level. The highs at VPI of \$57.45 and Virginia State-Petersburg of \$57.56 are substantially above the average for all institutions combined of \$37.40.

AVERAGE INSTRUCTIONAL SALARY COST PER FTE FACULTY MEMBER BASED ON 1967-68 FALL TERM DATA EQUATED TO A NINE-MONTH PERIOD ARE SHOWN IN TABLES 48 THROUGH 52. TO OBTAIN THIS ANALYSIS, THE TOTAL RESIDENT TEACHING SALARIES (TABLES A THROUGH E OF THE APPENDIX) WERE DIVIDED BY THE NUMBER OF FTE RESIDENT TEACHING FACULTY (TABLES 31 THROUGH 35) WITH APPROPRIATE ADJUSTMENTS BEING MADE FOR THE QUARTER TERM INSTITUTIONS.

CHART 9--AVERAGE INSTRUCTIONAL SALARY COST PER FTE FACULTY, 1967-68

The following tabulation shows the rank order of average salaries paid by student level and subject field, for all institutions combined.

<u>Foundation Level</u>		<u>Lower Level</u>	
<u>Subject Field</u>	<u>Amount</u>	<u>Subject Field</u>	<u>Amount</u>
For. Lang. & Lit.	\$13,100.00	Law	\$13,000.00

Any interpretations of the average instructional cost per FTE faculty should give consideration to some factors which may have affected this analysis. For example, in several instances the averages have been derived from data representing a relatively small number of faculty members. In addition, in certain cases average salaries are affected sub-

stantially by data from a single institution or a specialized group of institutions causing average salaries not to be representative of a majority of institutions. As an example, in the case of all levels of business administration presented in Table 52, if the data for RPI were excluded the average for four-year colleges and universities in that subject field would increase from \$9,664.22 to \$10,656.59.

APPENDIX

The State Council is of the opinion that the data presented in this report are representative of the analyses that can be made of the instructional programs of state-controlled colleges and universities with differences in institutional objectives, academic offerings, faculty, and student enrollments. The group of analyses, however, is not all-inclusive, and college administrators, regional education associations, governing boards, and other state-wide advisory agencies may desire to make other studies of the data. Therefore, to facilitate further application of the data in the examination of instructional costs, the total resident teaching salaries for the fall term of 1967-68 are presented in Tables A through E.

Because of the great volume of statistics provided throughout this report it is believed that summaries would be of benefit to the reader. Consequently, Tables F and G were prepared for this purpose.

A • TOTAL RESIDENT TEACHING SALARIES (foundation level)
